ORNAMENTAL GATES

Powder Coat Finishing

Powder coating is the technique of applying dry paint to a metal surface. Gate surfaces are machine sanded smooth prior to any coating. Any remaining oil and grease is removed with an alkali or neutral detergent solutions. The powdered paint is electrostatically charged and sprayed onto the gate. To obtain the final solid, tough, abrasion resistant coating, powder coated items are then placed in a special oven and heated to temperatures that range from 160 to 210 degrees C.

Swinging and Slide Gates

At Rick's, we offer options for both swinging and slide gates.
For swinging gates, the ideal driveway is level in the direction of travel 12' to either side of the gate opening and level across the opening of the drive. It is also recommended that the gate is not positioned on a curve in the driveway.

On-Site Planning & Designing

Once the area is surveyed for ideal placement and size of gate and the ground surface is inspected for being level and stable, we will then work closely with you to insure the gate fits its environment, your taste, and budget. Drawings are supplied to help with your gate selection. If you prefer a custom design, our design specialists will offer you a quote for your specific requirements.

Liftmaster Gate Operators

LA400PKGU: Setting the New Standard with Best-in-Class Features

Commercial-Duty Cast Aluminum Housing with Heavy-Duty DC Motor powerful enough to perform in the most demanding applications.

Soft Start/Stop and Mid-Travel Reversal extends operator and hardware life in high-cycle and heavy-gate applications.

Keyed Manual Disconnect when unlocked, allows gate to be operated manually.

Inherent Reversing Sensor detects obstructions or increased loads. Reverses gate when closing or stops/reverses the gate when opening.

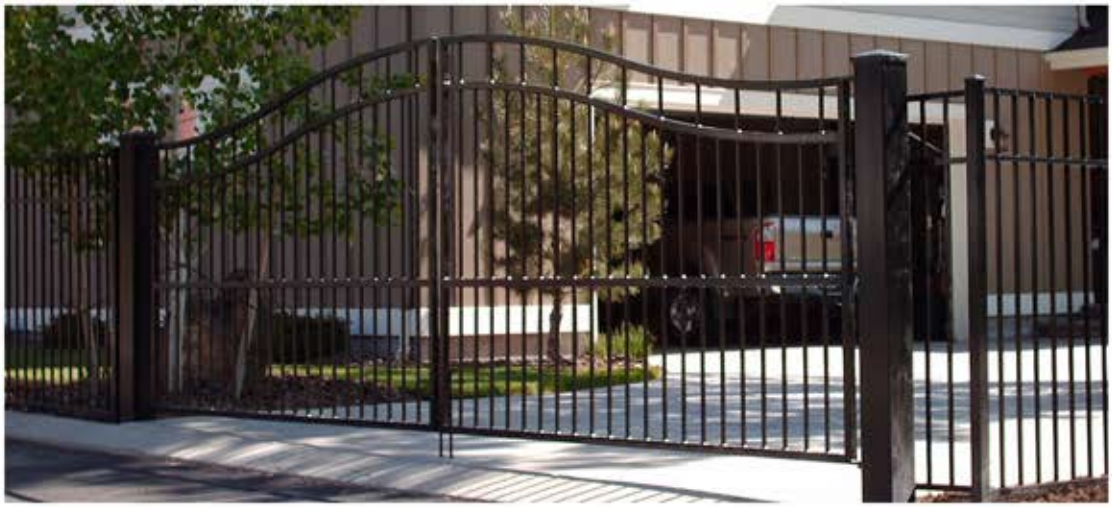
Fire Department Compliance allows gate to auto open upon loss of AC power or battery depletion.

Surge Suppression provides industrial surge and lightning protection against strikes up to 50 feet away.

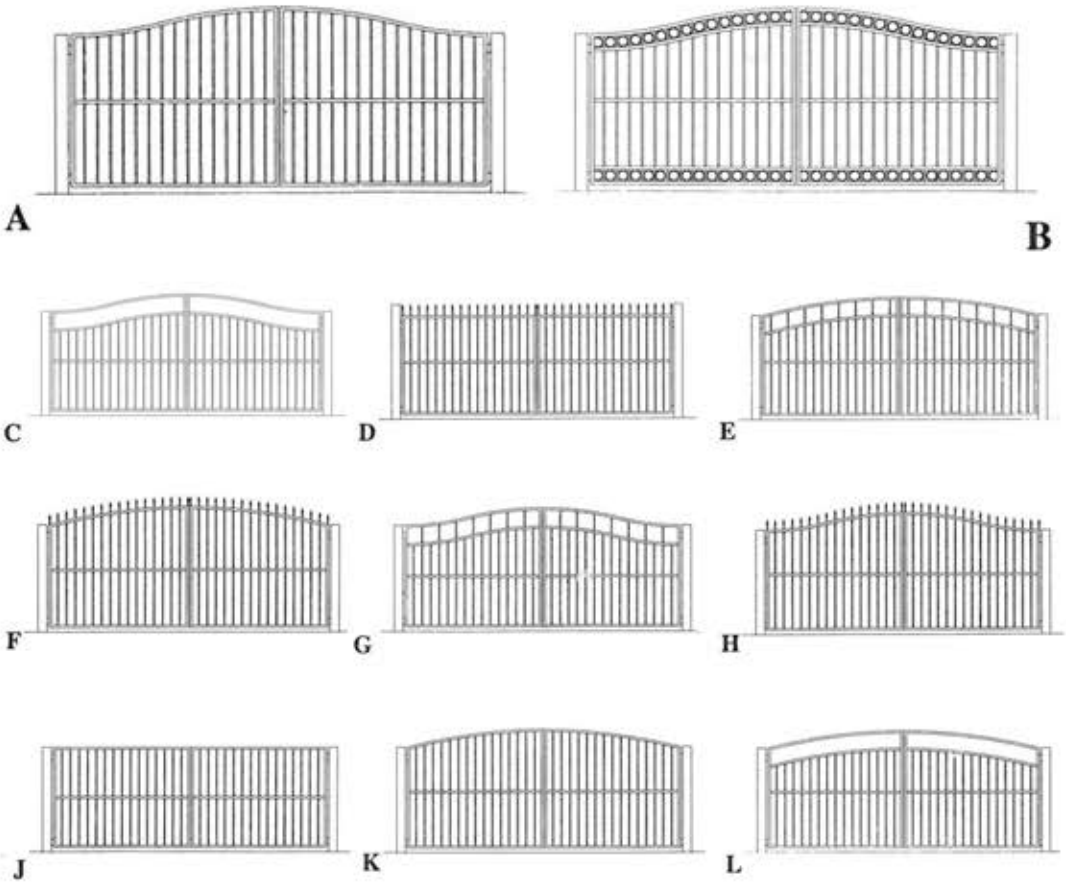
Party Pass allows for the gates to be held open for an extended period of time, ideal for parties.

IDEAL FOR
Ornamental or large swing gates and rural gate applications.

WARRANTY
Two years.



ORNAMENTAL GATE OPTIONS:



Built to last - Built by Rick's

Only heavy gauge steel is used in our production. Welds are ground down and blended into surrounding surfaces. Our gates are fabricated in our dedicated facility with precision and the highest quality control.

The hinges we install on all of our driveway gates use a pin type system that allows the gate to retain a smooth operation, by hand or using a gate operator. Our hinges are rated at 1,000 lbs. capacity per leaf. A normal gate leaf will weigh less than 300 lbs.

Swinging gates are installed with heavy 6"x6" posts and set 3' to 4' in concrete for a long sag free life. 5" and 4" posts also available.
