Cedar Decking

Port Orford Cedar Decking

0/200P

PORT ORFORD CEDAR DECKING

Legendary Durability

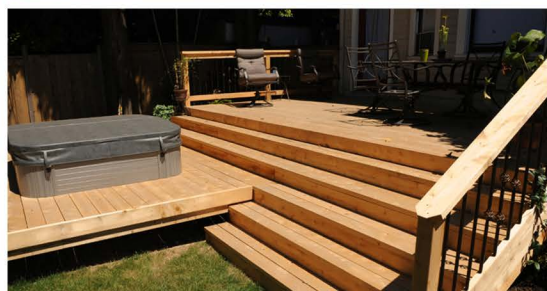

Port Orford Cedar is historically preferred for marine applications such as docks and fine boat building.

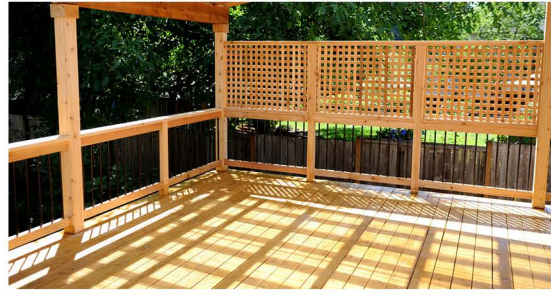

Exceptional Strength

Port Orford Cedar is 40% stronger than Redwood or Western Red Cedar in impact bending and 30% stronger in crushing strength.

Superior Manufacturing

Port Orford decking is Kiln-dried and is planed in a sixteen knife planer to give the product an impeccable smooth and soft luster. Since the turn of the century, the Johnson Family — the founders and owners of C&D Lumber Co. — have been known for their work ethic, respect for natural resources and love of Port Orford Cedar in America.

Installation Hints

Staining and finishing: A penetrating semi-transparent stain which contains ultraviolet blockers provides the greatest level of protection from the elements. Rick's Custom Fencing & Decking has developed one of the best stains on the market with UV protectant and mildew resistance. Ask your sales representatives for details. Although each manufacturer of stain provides careful guidance for their particular products, some basic rules generally hold true.

When applying the stain, we advise the stain be put on as thin layer, and any excess stain be wiped off to avoid excessive product application.

1. After installation, perform a water test to see if deck is ready to accept stain—check with your sales representative for details.
2. Clean deck thoroughly prior to staining.
3. Apply when surface of deck is between 40 and 80 degrees.
4. Follow directions of stain manufacturer.
